HTML.Hello()

Validation

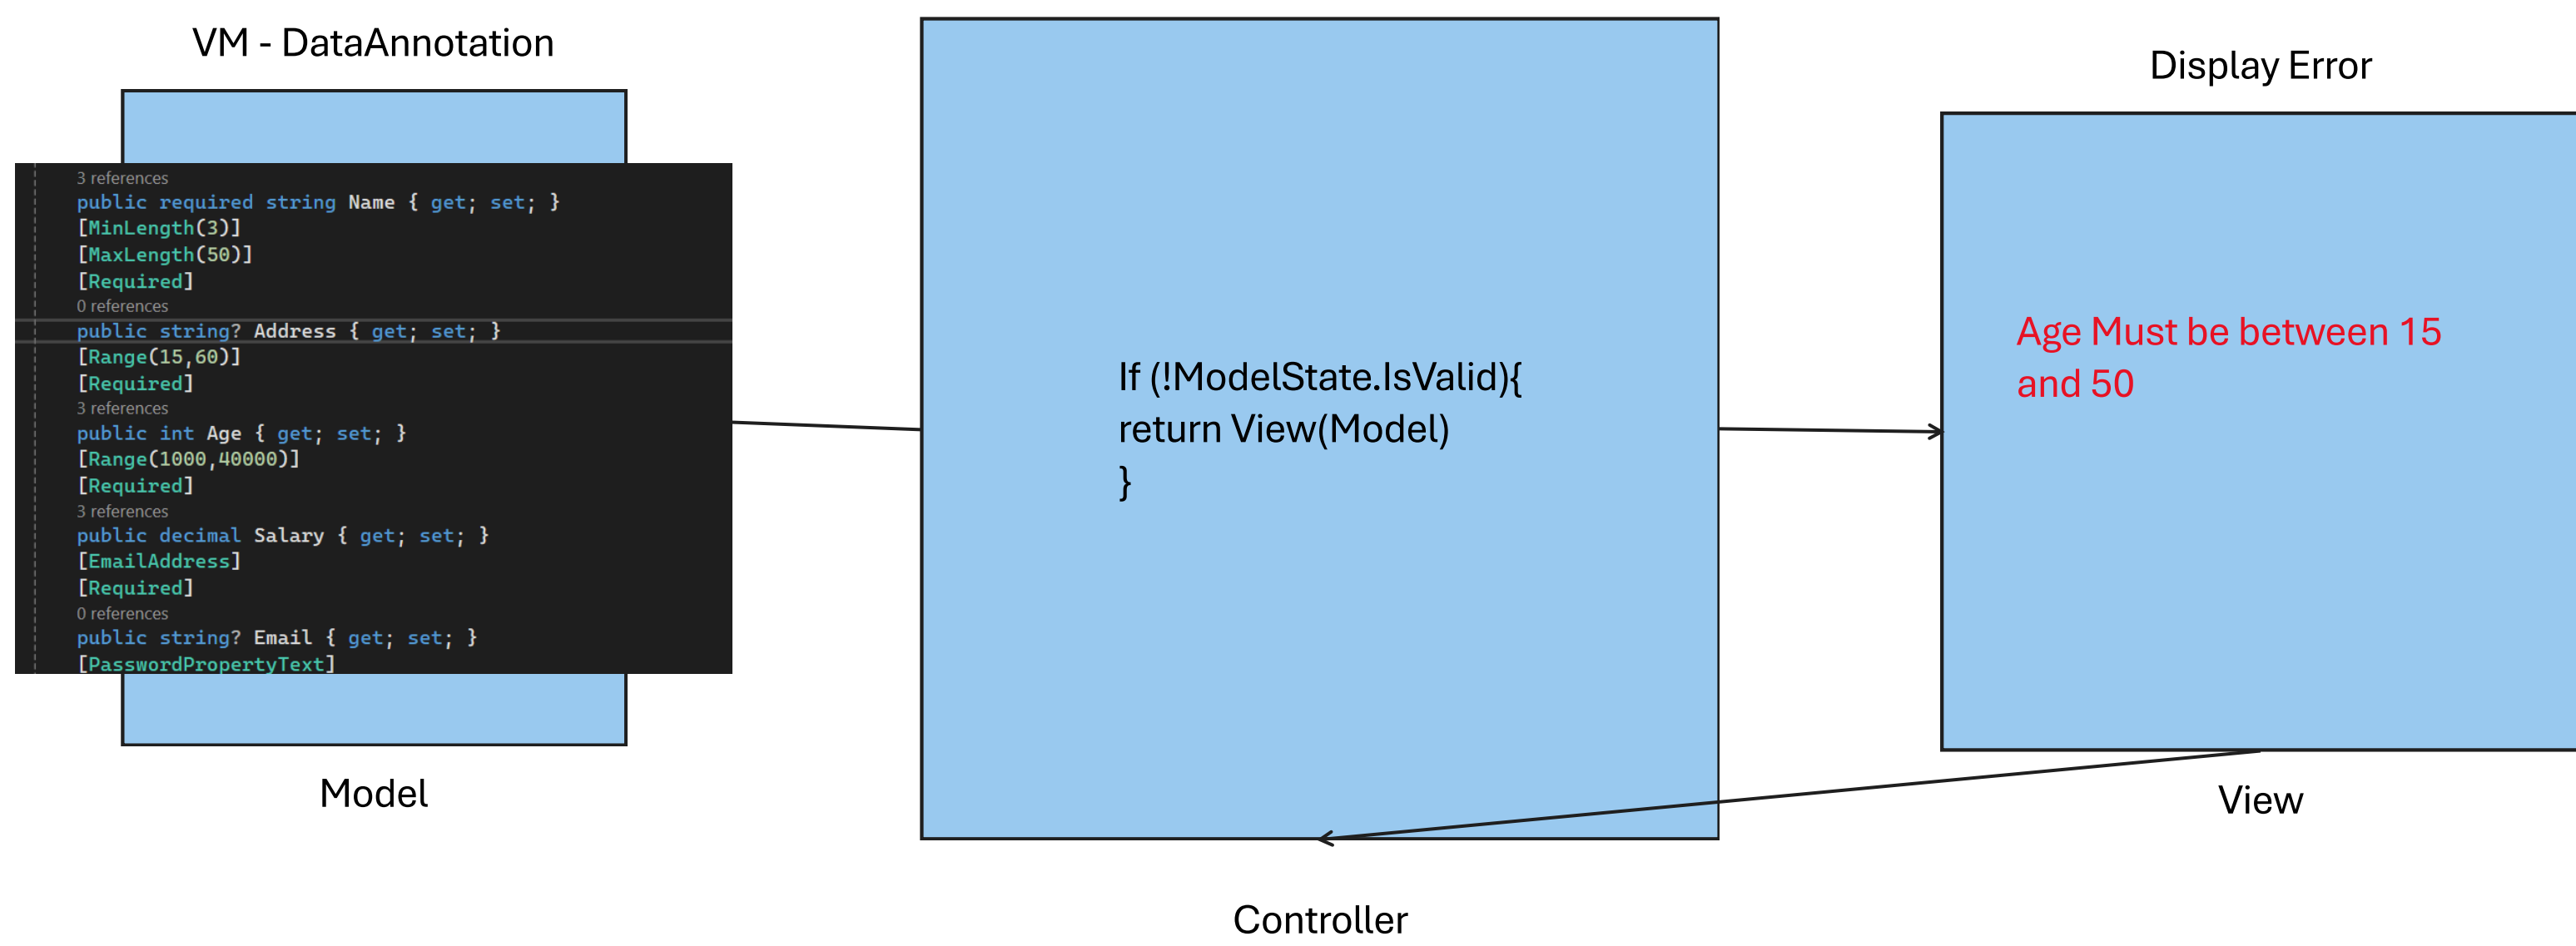

1. Client-Side Val => bypass
2. Server-Side Val
3. DB => Constraints

Validation:

- Required
- Data Type
- Reg Exp
- MinLength
- MaxLength
- Compare
- Range
- EmailFormat
- Password

—————> DataAnnotation For Validation

[ForeignKey] //DataAnotation
prop int DepartmentId

Custom Validation => Date Of Birth => DOB < age

Class => "Name"Attribute : ValidationAttribute

```
[HttpGet]
public IActionResult Create()
{
    //ViewBag.Departments = new SelectList(db.Departments, "Id", "Name");
    var employeeCreateVM = new EmployeeCreateVM
    {
        Departments = GetDepartmentsForDropDown()
    };
    return View(employeeCreateVM);
}
/*-----*/
// V02
[HttpPost]
public IActionResult Create(EmployeeCreateVM employeeCreateVM)
{
    // employeeCreateVM => Don't Have Id
    // Map From VM To Domain Model
    if (!ModelState.IsValid)
    {
        employeeCreateVM.Departments = GetDepartmentsForDropDown();
        return View(employeeCreateVM);
    }
    var employee = new Employee
    {
        Name = employeeCreateVM.Name,
        Age = employeeCreateVM.Age,
        Salary = employeeCreateVM.Salary,
        DepartmentId = employeeCreateVM.DepartmentId
    };

    db.Employees.Add(employee);
    db.SaveChanges();
    return RedirectToAction("Index");
}
```
